MICROLEARNING

BEYOND TRAINING

We continue to engage our participants post the classroom sessions and drive efficiency with our easy to use mobile application. Available for both Android and iOS users, our APP helps sustain the learning post training.

Viewable online or offline, our participants receive microlearning nuggets, in relation to the Program through our APP thereby helping learners achieve higher proficiency levels.

After receiving all assigned content over the app, participants are delivered an MCQ. This is to evaluate their engagement with the shared content and their knowledge and understanding of the training they have undergone.
